LBS8-R1-AM

CEILING TILE BRIDGE

Often required by local building codes for safety purposes, the LBS8-R1-AM is a tile bridge for the PC-580RU & PC-580RVUU. It distributes the weight of each speaker assembly to the ceiling support structure in a suspended 2x2 or 2x4 tile ceiling, helps to maintain the overall aesthetic of any installation, and most importantly, reduces the likelihood of tiles sagging under the weight of either speaker. The LBS8-R1 can be used with or without a backbox (depending on local building codes and the weight /style of the speaker assembly).
